

The #1 for clinical users

As the number one E-Prescribing and Medicines Administration system in the UK, JAC's EPMA solution is used all day every day by doctors, nurses and clinical pharmacists.

Who's using JAC?

Full EPMA

(inpatients, outpatients, discharge, etc)

32 Trusts

Outpatients & TTA

08 Trusts

Pharmacy Systems

119 Trusts

What are they using it for?

Theatres	Paediatrics
Surgical Wards	Orthopaedics
Medical Wards	Dialysis
OutPatients	Discharge
ITU	Mental Health
A&E	Community

"JAC's EPMA takes users beyond a pharmacy system to a multidisciplinary clinical support system for the most common form of treatment - medicines."

“We chose to work with JAC and First DataBank Europe because of the combined expertise in the field of electronic prescribing and patient safety.”

Clinical Director
Doncaster and Bassetlaw Hospitals

“JAC’s EPMA takes users beyond a pharmacy to a multidisciplinary clinical support for the most common form of treatment – medicines.”

“The functionality and flexibility of the JAC system enabled the IoW Trust to integrate inpatient prescribing throughout a number of wards and specialist environments, including Mental Health, Emergency Department and Pre-operative Assessment units as well as the Operating Theatres. This has enabled the clinical teams to easily access accurate patient information and shows that the benefits are not limited to the pharmacy; they are truly Trust-wide.”

Chief Pharmacist
Isle of Wight NHS Trust

“The practical side of ePrescribing is straightforward and easy to use. New Doctors who come here from a ‘paper based system’ are up and running in two weeks and never want to go back to paper.”

“We couldn’t function without the support from the patient discharge process. In JAC this supports the real time recording of all medication processes during the inpatient stay so that at the time of discharge the summary produced is very important because it contains the salient information for the next person handling the care of the patient.”

Consultant in Cardiovascular & General Medicine
University Hospital Ayr

The e-Prescribing system is excellent. It is easy to use and not only does it help practitioners feel more confident in their prescribing but also makes the dispensing quicker. This computerised method is a much better way to manage medicines and improve patient safety and I’m delighted this is being extended to all areas of the Trust.”

Consultant Psychiatrist
Leicestershire Partnership

“Overcoming the challenges of a change in system has yielded benefits that positively impact a typical day for me. I am now able to prescribe up to 10 drugs at the click of a button from standard pre-defined templates, making pre-operative ward rounds quicker and more accurate.”

“Additionally, being able to review and change post-operative drugs for a patient during recovery can be done using remote access when necessary, resulting in a quicker response for the patient.”

Consultant Anaesthetist
Isle of Wight NHS Trust

“The greatest benefit is time saved. Medications can be reviewed and written up remotely. The drug round is speeded up by half with no compromise in patient safety. Charts are always clear with no transcribing of full paper charts.”

Neurological Rehabilitation Nurse
